Markdown template style guide

While Markdown is a relatively standard way to specify formatting, the devil is always in the details – how do you separate sections? Do you use h2 or h3 for subsections?
This is our attempt to agree on a way to format all the Markdown pads so that we get beautiful outputs.
We're following Pandoc's Markdown implementation; its documentation is available at `http://pandoc.org/MANUAL.html#pandocs-markdown`.

Heading levels

- **h1** is used only for the title of the pad on the first line
- **h2** for section titles
- **h3** for subsection titles (use `#` at the start of the line for a header. The number of `#` specifies the header level, e.g. `###` for h3.

Links

We're using automatic links from Pandoc's Markdown implementation, e.g. `http://duckduckgo.com`. This is so that printed PDF show the actual URL and not just the underlined title.

Footnotes

```
This is a text with a footnote[^1]

[^1]: footnote content
```

You can also use text as the footnote tag, e.g. `["survivalguide]`.

Formatting reminders

- **bold** text
- *italic* text
- ~~strikethrough~~ text
- ***bold & italic***
- headers (don't use h1!)
- `## Heading level 2`
- `###` Heading level 3
- `####` Heading level 4
- `#####` Heading level 5
- `######` Heading level 6
- lists

Formatted pads

- `http://etherbox.local:9001/p/constellationofwares.md`
- `http://etherbox.local:9001/p/etherboxmanual.md` (work in progress)
- `http://etherbox.local:9001/p/jans_heuns` needs to have .md in the name
